

## Assignment 10: React.js: Keeper App Project (Module 20)

### Objective

This project focuses on creating a sophisticated Keeper App using React JS. The app will incorporate advanced React concepts to deliver a modern, efficient, and interactive user experience. Below are the key components and technologies that will be utilized in the development process.

### Project Requirements

- Utilize JSX to enhance the readability and maintainability of the UI code.
- Use Bootstrap or Tailwind for Component Styling and not use Inline CSS. ( If you do not know how to use Bootstrap or Tailwind in React, use YouTube and Google to gain knowledge on your)
- Create a Responsive Website for all screen sizes
- Break down the application into reusable components.
- Use Props for Data Passing Between Components
- Use only an arrow function.
- Use Hook data handling.
- Create an Impressive design.
- Show Alert when the input field is empty, and click the add button
